A2: Accounting Reference

This example illustrates A2's order processing, rejection, and valuation rules. Use it to check your understanding, then construct different small market files for your own tests.

Suppose the account begins with **$100.00**, or `10000` cents, and the market file contains:

```
date,ALFA,BETA
2024-01-02,10.00,25.00
2024-01-03,12.00,20.00
2024-01-04,11.00,21.00
```

Assume a strategy proposes these orders:

Date	Orders, in order
2024-01-02	Buy 3 ALFA
2024-01-03	Sell 1 ALFA; then buy 2 BETA
2024-01-04	Buy 4 ALFA; then sell 1 BETA

The resulting ledger is:

Date	Result of ordered processing	Cash	ALFA	BETA	Portfolio value
Start	No shares	$100.00	0	0	$100.00
2024-01-02	Buy 3 ALFA for $30.00	$70.00	3	0	$100.00
2024-01-03	Sell 1 ALFA for $12.00, then buy 2 BETA for $40.00	$42.00	2	2	$106.00
2024-01-04	Reject the $44.00 ALFA purchase	$63.00	2	1	$106.00

Date	Result of ordered processing	Cash	ALFA	BETA	Portfolio value
	because only $42.00 is available; then sell 1 BETA for $21.00				

The final return is

```
($106.00 - $100.00) / $100.00 = 6.00%.
```
